

## First Python Program

Lets write our very first Python Program.

- After Installing Python in PC, Open Python shell.
- `>>>`, These arrows are called chevrons.
- Now, you can enter the Python code after the cursor `[>>>]` and press `[Enter]` to execute it:

Source code

```
# This Program prints Hello, world!  
print("Hello, world!")
```

Output

```
Hello, world!
```

- In this Program, we have used the `[print()]` function to print the string, `[Hello, world!]` on screen.
- In Python, strings are enclosed inside a single quotes, double quotes, or triple quotes.

```
>>> print("Hello, World!")  
Hello, World!
```
